

01-landingpage – Project Summary

DE – Projektübersicht

Projekt: 01-landingpage

Zeitraum: 06. Mai 2026 – 15. Mai 2026

Sessions: 01-2026-S01 bis 01-2026-S08 (inkl. S03 in zwei Teilen)

Gesamtdauer: ca. 16 Stunden

Live: <https://umitwebdev.github.io/01-landingpage>

Repository: <https://github.com/umitwebdev/01-landingpage>

Was gebaut wurde

Interaktive Landingpage mit Vanilla JavaScript. Kein Framework, keine externe Bibliothek.

- Klick-Counter mit drei Schwellwert-Stufen (normal / ab 10 / ab 20)
- Like-Button mit Toggle-Logik (Instagram-Style: liken / unlikten)
- Dark-Mode-Toggle mit 1s CSS-Transition
- Reset-Funktionen für Counter und Likes
- LocalStorage-Integration – Klick-Counter überlebt Seitenreload (F5)
- Vollständiges Event-Binding über `addEventListener` (Separation of Concerns)

Konzepte

Konzept	Session
HTML-Struktur, CSS-Styling, JS-Grundlagen	S01
Variablen, Funktionen, DOM-Manipulation	S01
Scope, Klick-Counter, DRY-Prinzip	S02
if / else, Zuweisung vs. Vergleich	S03

Konzept	Session
Git, GitHub, Live-Deployment	S04
Toggle-Logik, Status-Variable, Boolean	S05
addEventListener, Separation of Concerns	S06
classList.toggle, CSS-Spezifität	S06
LocalStorage (setItem, getItem, Number())	S08
CSS-Transition	S08

Tech-Stack

- HTML5
- CSS3 (Flexbox, kombinierte Selektoren, Transitions)
- Vanilla JavaScript (DOM-Manipulation, LocalStorage)
- Git / GitHub
- GitHub Pages (Hosting)
- VS Code + Live Server

Dateistruktur

```
01-landingpage/
├─ index.html
├─ style.css
├─ script.js
└─ README.md
```

EN – Project Overview

Project: 01-landingpage

Period: May 6, 2026 – May 15, 2026

Sessions: 01-2026-S01 through 01-2026-S08

Total duration: approx. 16 hours

Live: <https://umitwebdev.github.io/01-landingpage>

Repository: <https://github.com/umitwebdev/01-landingpage>

What was built

Interactive landing page built with Vanilla JavaScript. No frameworks, no external libraries.

- Click counter with three threshold states (normal / at 10 / at 20)
- Like button with toggle logic (Instagram-style: like / unlike)
- Dark mode toggle with 1s CSS transition
- Reset functions for counter and likes
- LocalStorage integration – click counter persists across page reloads
- Full event binding via `addEventListener` (Separation of Concerns)

Concepts covered

Concept	Session
HTML structure, CSS styling, JS basics	S01
Variables, functions, DOM manipulation	S01
Scope, click counter, DRY principle	S02
if / else, assignment vs. comparison	S03
Git, GitHub, live deployment	S04
Toggle logic, state variable, Boolean	S05
addEventListener, Separation of Concerns	S06
classList.toggle, CSS specificity	S06
LocalStorage (setItem, getItem, Number())	S08
CSS transitions	S08

Tech stack

- HTML5
- CSS3 (Flexbox, compound selectors, transitions)
- Vanilla JavaScript (DOM manipulation, LocalStorage)
- Git / GitHub
- GitHub Pages (hosting)
- VS Code + Live Server

Key decisions

- No frameworks – deliberate choice to build foundational understanding before React
- `addEventListener` over inline `onclick` – refactored for clean separation of concerns
- `LocalStorage` over `SessionStorage` – persistent state across reloads
- CSS class toggle over JS style manipulation – keeps styling in CSS
